

Greenhouse IoT Backend

Backend Engineer Assignment

Tech Stack:

- Go
- MQTT (Mosquitto)
- SQLite
- HTTP RESTful API

Conventional or Ideally: IoT > MQTT (Mosquitto) > Go (Backend Subs) > Time Series DB

Current: IoT > Go (API Service) > (MQTT (Publish to Mosquitto)) OR (Time Series DB)

POST /sensor-data

Validate Payload > Insert to SQLite > Success Response Header (201)

POST /device-control

Validate Payload > MQTT Publish to topic greenhouse/control/{device_id} > Success Response Header (202)

GET /status

Success Response (200) with returning 3 fields (Backend, MQTT, Database)

GET /status

Success Response (200) with returning 3 fields (Backend, MQTT, Database)
